

Ticket ID	Alert Message	Severity	Details	Ticket status
A-2703	SERVER-MAIL Phishing attempt possible download of malware	Medium	The user may have opened a malicious email and opened attachments or clicked links.	Escalated ▾

Ticket comments
An alert was detected following a company employee downloading and opening a trojan from a phishing email. Analysis of the email shows grammatical errors found in the subject line and the body of the message, including a password protected downloadable attachment <i>bfsve.exe</i>. The file hash was confirmed to be a malicious file following an investigation and confirmation conducted by over 50 security vendors. The alert sensitivity was reported as medium upon arrival, however, I am escalating this alert to the next level SOC analyst for further action and resolution of this matter.

Additional Information

Known malicious file hash:
